RSA AUTHENTICATION MANAGER 8.0
Feature Overview

ESSENTIALS

Delivers Flexibility and Convenience with a New Risk-Based Authentication solution (optional license)

- Expands the use of Strong Authentication for web based applications

- Easily deploy Risk-Based Authentication alongside hardware and software-based authenticators

- Significantly lower authentication, administration and deployment costs

Lowers Total Cost of Ownership

- Utilize a suite of built-in features that addresses the most time-consuming and costly tasks associated with managing an enterprise authentication suite

- Allow your IT staff to do more with less

Maximizes the Potential of Your Virtual Environment

- Take full advantage of virtualization in your organization to ease deployment, administration, and on-going system management

- Leverage infrastructure and virtualization skills you already have on hand

RISK-BASED AUTHENTICATION

- Optionally licensable authentication method up to 20,000 users

- Single license for both Risk-Based Authentication and On-demand (SMS)

- Virtually transparent to end users

- Utilizes device and behavioral characteristics to create assurance level

- Perpetual license, no expiration

- Step up methods: On-demand or challenge questions

- Separate maintenance required on RBA/ODA combo license

CORE ENHANCEMENTS

- Faster deployment and configuration

- Simple patching procedure

- Simple, Advanced and Test migration options

- New and improved database and replication model

- Seamless Identity Source integration

- IPv6 support (agent-server)

- Simple hostname & IP address change

- Simple certificate replacement

- Improved monitoring and security with SNMPv3

- Support for 1,000 concurrent administrative sessions

- Support for 30,000+ RADIUS Clients

TROUBLESHOOTING

- Help Desk User Dashboard

- Critical System Notifications for proactive management

- Logging improvements for faster time to resolve problems

- Replication management & troubleshooting

- Improved troubleshooting documentation

EMC²®

USER DEPLOYMENT

- Web Tier for DMZ deployment of Self Service, CT-KIP services and RBA Proxy
- Easy/fast customization and branding
- I18N/L10N localization in 4 additional languages

ADMINISTRATION

- Simplified and enhanced backup/restore
- Tightly integrated RADIUS replication, backup and promotion
- Fast and Secure Software Token Distribution
- Administrative Command Line Interface (CLU) moved to the GUI
- New Import / Export users and tokens
- Streamlined system configuration
- Network Troubleshooting Tools
- Cross Trust (Cross Realm) Deployment
- Improved MMC Console

VIRTUAL APPLIANCE

- Support for VMware vSphere tools such as Snapshot, vMotion, High Availability and Fault Tolerance
- Standards-based Open Virtualization Format (.ova)
- Based on hardened SuSE Linux 11 SP2
- Standalone or clustered VMware deployments
- Fast deployment time - Virtual Appliance deploys in 20 minutes
- Compatible with Enterprise & Free Versions of ESXi & vSphere
- Hardened Security Profile follows STIG guidelines for Linux
